

# Water Wellness Watch

A collaborative community science event to monitor our local coastal water quality

## Catch the King

Catch the King is an annual tide mapping event run by Wetlands Watch whose volunteers collect flood data during the King Tides—the highest tides of the year. Use the Sea Level Rise app to collect flood extent data for the project that holds the world record for most contributions to an environmental survey!

## Measure the Muck

While you're out mapping King Tide flooding, grab some water samples to help Old Dominion University researchers measure nutrients and bacteria that get brought out to the Chesapeake Bay during flooding events. Register and learn more:

<https://forms.office.com/r/ssUZwKEAyL>

## International Coastal Cleanup

The marine debris awareness team at Old Dominion University, “From Learning to Willing to Doing,” is running a coastal cleanup after the King Tide to see the trash that washed up from the flooding event. Partnering with Keep Norfolk Beautiful and Clean Virginia Waterways, they hope to make this an ongoing cleanup event to prevent plastics and pollution in our community.
